

Task 2

IAM policies and permissions

In this task, you will implement the right access policies for different kinds of data

Here is the background information on your task

Based on the previous assessment you see that the client is mostly struggling with identity and access management together with secure development and you, therefore, raise these as the two main development areas. You have a workshop with the client, where you identify the most important initiatives within these two areas and prioritize them to a roadmap.

You agree with the client to proceed with the initiatives raised in the roadmap, and therefore connect with your colleagues from the Identity and Access Management (IAM) team and from the Application Security team to continue discussions with the client.

The customer is implementing new access policies to its organization's data. They need you to make an assessment where you will classify the data and decide on appropriate controls for them.

Here is your task

Complete the drag and drop task in section 5. Drag the block to the slot where the right control will apply with a matching example.

IAM Policies and Permissions
Uploading this file will allow the system to qualify your work.

	Classification	Access control	User group example
Press releases	Public	Allow All	Everyone
HR Handbook	Internal	Allow Internal Users Only	Company Employees
Customer payment history	Restricted	Limit access to a role 'Finance Data Viewer'	Accounting Department
